

ECG #14

A 56-year-old man presented to the emergency department with palpitations. Describe and interpret the following series of electrocardiograms:

[Show solution](#)

DDx: Supraventricular Tachycardia (SVT) with Aberrancy *versus* Ventricular Tachycardia (VT)

[Show solution](#)

1. Administration of intravenous adenosine unmasked underlying atrial flutter waves
2. Rhythm deteriorated into ventricular tachycardia
3. Return of sinus rhythm after synchronised DC cardioversion

[Show solution](#)

12-lead electrocardiogram post-synchronised DC cardioversion demonstrating sinus rhythm with quadrigeminy and a right bundle branch block
